NAME : YASHI SINGH

REGISTRATION NUMBER : 25BCE10691

BRANCH : COMPUTER SCIENCE

YEAR : 2025 – 2029

COURSE TITLE : DIGITAL LITERACY

COURSE CODE : CSE0001

DATE OF SUBMISSION : 28 MARCH 2026

INTRODUCTION

Digital literacy is an essential skill in today's technology-driven world. It involves the ability to effectively use digital tools, communicate professionally online, and stay safe while using the internet. This project was designed to enhance our understanding of various digital platforms and responsible online behavior.

Through this project, I explored multiple aspects of digital literacy, including creating an infographic, building a professional digital portfolio, practicing coding, and understanding cyber safety. Each task focused on developing practical skills that are useful for academic and professional growth.

Overall, this project provided hands-on experience with important digital tools and improved my awareness of online communication and security practices.

TASK 1 – WRITE UP

For Task 1, I created a digital literacy awareness infographic using Canva. Instead of using a predefined template, I designed the infographic from scratch by selecting my own background, layout, and visual elements. I used a matrix-style background with binary digits to represent the digital theme and added structured sections using colored rectangles for better organization.

The infographic covers key aspects of digital literacy, including its meaning, useful digital tools for students, safe internet practices, and professional online presence. I used bullet points and simple language to ensure the content is easy to understand and visually clear. Additionally, I included graphical elements such as a 3D robotic arm to enhance the overall design and give it a modern, technology-oriented look.

One interesting aspect of this task was creating a balanced layout without relying on templates. It required careful attention to spacing, alignment, and readability, especially while working with a detailed background. Overall, this task helped me improve my design skills and understand how to present information effectively in a visually appealing way.

TASK 2 – WRITE UP

For Task 2, I created professional profiles on GitHub, LinkedIn, and Kaggle. These platforms are widely used for showcasing skills, networking, and practicing technical knowledge.

GitHub was used to create a profile README and will be used in the future to upload my coding projects and assignments. LinkedIn helped me build a professional identity where I can connect with peers and potential recruiters. Kaggle introduced me to the field of data science and machine learning, where I can practice working with datasets.

These platforms will play an important role in my academic and professional journey over the next four years. I plan to regularly update my GitHub with projects, improve my LinkedIn profile with achievements, and explore Kaggle for learning new concepts. This task helped me understand the importance of maintaining a strong digital presence.

TASK 3 – WRITE UP

In Task 3, I explored coding and collaboration platforms by using HackerRank and Google Forms. On HackerRank, I solved a beginner-level coding problem, which helped me understand basic programming logic and problem-solving techniques.

For the collaboration part, I created a Digital Literacy Awareness Quiz using Google Forms. The quiz included multiple-choice and short-answer questions to test the understanding of digital literacy concepts. I also linked the form to a Google Sheet to automatically collect responses.

This task helped me understand how online platforms can be used for both learning and collaboration. HackerRank will help me improve my coding skills through practice, while Google Forms is useful for conducting surveys and collecting data efficiently. These tools will be valuable for my academic work and future projects.

TASK 4 – WRITE UP

Task 4 focused on professional communication and email etiquette. I wrote two emails: one requesting an assignment extension and another applying for a summer internship. This task helped me understand the importance of clear subject lines, polite language, and proper structure in professional emails.

I also created a checklist of social media do's and don'ts to promote responsible online behavior among students. This helped me reflect on how communication style and online presence can impact personal and professional relationships.

The key learning from this task is that effective communication is not just about conveying information but also about maintaining professionalism and clarity. Proper digital communication can create a positive impression and avoid misunderstandings.

TASK 5 – WRITE UP

While working on Task 5, I researched phishing as a type of cybercrime. I was surprised to learn how easily attackers can create fake messages and websites that look real, making it difficult for users to identify scams.

This task made me more aware of the risks associated with online activities and the importance of being cautious. One habit I will change is being more careful before clicking on links or sharing personal information online. I will always verify the authenticity of messages, especially those related to banking or urgent requests.

Overall, this task increased my awareness of cyber threats and encouraged me to adopt safer online practices.

CONCLUSION

This project provided valuable insights into the importance of digital literacy in today's world. It helped me develop practical skills such as creating visual content, building a professional online presence, practicing coding, and understanding cyber safety.

Each task contributed to improving my knowledge and confidence in using digital tools effectively. I also learned the importance of responsible communication and maintaining professionalism online.

Overall, this project has prepared me to use digital platforms more efficiently and safely in both academic and professional environments.
